Juven® detailed case study
Toe Amputation

Overview
Lawrence, a 68-year-old male, had long-term history of diabetes mellitus and renal failure. His previous surgical foot wound took 10 months to heal.

Before amputation
1 month after his first amputation, wound showed no signs of healing despite a caregiver’s diligent care. There were also signs of infection.
- Left second toe was amputated
- Caregiver was uneasy about caring for his wound because of history of poor healing; it took 10 months to heal the wound from his big toe amputation

1 month after amputation
Wound was not healing and showed signs of infection.
- Visited the doctor for a checkup
- Doctor recommended nutrition therapy with Juven
  - Mixed Juven with 8 oz of cold water and drank 2 servings each day

6 days of Juven therapy
After 6 days of Juven therapy, there was evidence of wound granulation.

13 days of Juven therapy
New tissue covered the wound area. Wound had closed (photo not available).

Where to find Juven
At the Abbott Store
- Online at www.abbottstore.com
- By phone at 1-877-GO-JUVEN (1-877-465-8836)
(Free shipping and coupons accepted)

In store or at your local pharmacy

Juven helped to support healing of a toe amputation wound by building new tissue.*

*Juven has been clinically shown to support building new tissue at wound site within 2 weeks.

Use under medical supervision and as part of a complete, balanced diet.
